Draft: GitHub Support request (attribution of placeholder email x@x)

Subject: Commits attributed to an unrelated account via placeholder email x@x

Hello, in repository vasic-digital/catalogizer two commits (3e83fce6, 354feb6c, 2026-11-04) were authored by an automation with the placeholder identity x <x@x>. GitHub links these commits to the unrelated account xxxxxxxxxxxxx (no repositories, no profile; not a collaborator) and lists it as a contributor. We did not add this account. Please unlink the email x@x from that attribution (or confirm how we can request it) so the account no longer appears in the contributors list. History rewriting is not possible for us (no force-push policy); a `.mailmap` mapping exists locally. Thank you.
